

week 6 report
yicheng sun
01356301

In this week, first I want to deploy my web in cs-lab, I tried a lot work, however I failed to deploy it under my django frame. it seems our lab environment cant support django frame.

After that I changed my mind, I use amazon AWS server to deploy my web application. I read a lot instructions and finally, it works, the links is <http://photo-env.mitbkbpdq.us-west-2.elasticbeanstalk.com/index.html> now you can click this link to check my work.

next week, I will try to deploy my data on AWS sql database
